Director of Nuclear Reactor Regulation  
United States Nuclear Regulatory Commission  
Washington, DC 20555

Dear Sir:

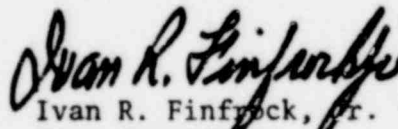

Subject: Oyster Creek Nuclear Generating Station  
Docket No. 50-219  
40 CFR 190 Requirements

By letter dated September 17, 1979, Mr. William P. Gammill of your staff requested a commitment from all power reactor licensees to conform to the requirements of 40 CFR 190. It is our intention to meet this regulatory requirement on or before December 1, 1979. Initially, this will be accomplished by complying with the requirements set forth in our Radiological Effluent Technical Specification submittal of June 1, 1979.

As a result of a meeting between members of my staff and your staff on September 13, 1979, we have committed to submitting a Technical Specification change that will make the guidelines of Appendix I Limiting Conditions for Operation (LCO) for the Oyster Creek Station. Upon approval of this Technical Specification Change, we will use compliance with the LCO to demonstrate compliance with 40 CFR 190.

If you have any questions, please contact Mr. James Knubel of my staff.

Very truly yours,

  
Ivan R. Finfrock, Jr.  
Vice President
