Operating Reactors Branch No. 1
Division of Operating Reactors
Washington, DC 20555

Reference: Beaver Valley Power Station, Unit No. 1
Docket No. 50-334
Reactor Vessel Overpressure Protection System

Gentlemen:

In our December 14, 1978, submittal concerning upgrading of the Reactor Vessel Overpressure Protection System, we stated that the relief valves had been seismically qualified by testing. We wish to correct that submittal and to inform you that the relief valves were actually certified by seismic analysis. The Vendors analysis has been reviewed by the Duquesne Light Company Engineering Department and complies with the seismic design requirements of the Beaver Valley Power Station.

Very truly yours,

C. N. Dunn
Vice President, Operations
