Mr. William P. Gammill
Acting Assistant Director
Operating Reactor Projects
Division of Operating Reactors
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Gammill:

This letter is in response to your letter of October 2, 1979 with respect to our acceptance of certification of NRC staff members in radiation safety by Oak Ridge Associated Universities.

Oak Ridge Associated Universities (ORAU) advised us of their intended Radiation Safety course earlier this year. At that time we compared our General Employee Training Lesson plan with their proposed course outline. We verbally agreed that the material to be covered would be acceptable as a generic radiation protection training program. We will, therefore, accept certification of this training for NRC personnel visiting Peach Bottom. Such personnel, however, shall attend a short sub-module of training in emergency procedures, security, safety, and practices unique to Peach Bottom.

We have placed the NRC Radiation Safety Seminar schedule on file at our Peach Bottom Atomic Power Station and would appreciate additional detailed description of the various sessions. We would also appreciate timely notification of content changes to the program for our review so that we can satisfy ourselves of the continued acceptability of the certification. Initial documentation of certification may be provided either by individuals upon arrival directly to the station security forces or by prior notification through the NRC Region I Office of Inspection and Enforcement.

Confirmation of requalification on an annual basis for each individual will be necessary so that we can comply with our procedures and should be addressed to the Station Superintendent, Peach Bottom Atomic Station, RD #1, Delta, PA 17314.

If you have any questions or require additional information, please contact us.

Very truly yours,

A handwritten signature in dark ink, appearing to be "Robert H.", is written over the typed name "Robert H.".
