Mr. Steven A. Varga  
Acting Assistant Director for  
Light Water Reactors  
Division of Project Management  
Office of Nuclear Reactor Regulation  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Dear Mr. Varga:

Reference: Enrico Fermi Atomic Power Plant - Unit 2  
NRC Docket No. 50-341  
NRC Letter, "Confirmatory Requirements Relating  
to Condensation Oscillation Loads for the Mark I  
Containment Long Term Program," October 1, 1979

Subject: Requirements for Additional Full-Scale Test Facility  
Testing in the Mark I Containment Long Term Program

In your letter of October 1, 1979, we were notified that the Nuclear  
Regulatory Commission will require additional large break, liquid  
blowdown confirmatory tests in the Full-Scale Test Facility.  
The letter requests that Detroit Edison commit, on behalf of  
the Mark I Owners Group as a whole, to perform these tests and  
submit the test plan and schedule by October 31, 1979.

We view a commitment to perform additional Full-Scale Test Facility  
confirmatory tests as a major Owners Group commitment. However,  
most of the Mark I Owners have not yet received your October 1  
letter.

A Mark I Owners meeting is planned for mid-November to discuss this  
subject. We hope that all the Owners would have received your  
letter by this time. We, therefore, request a delay in our response  
to your October 1 letter until after that meeting but no later than  
November 30, 1979.

Sincerely,

*Wayne H. Jens* A025
