EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

On October 11, 1979, it was determined that due to procedural inadequacies, a particular sequence of manual switching of the primary coolant low level dew point moisture monitors could have resulted in a degraded mode of LCO 4.4.1. This is reportable per Fort St. Vrain Technical Specification AC 7.5.2(b)3.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 | An approved field change notice (FCN 3738B) made the automatic trip on moisture
1 1 | monitor system failure a manual action and revised the logic to allow individual
1 2 | moisture monitors to be tripped (rather than disabling by pairs). However, if the
1 3 | correct switching sequence was not followed it was possible to lock out a moisture
1 4 | monitor inadvertently. The system operating procedure was revised to prevent this
7 8 9 | from occurring. No further corrective action is anticipated or required. 80
