EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
0 2 At 0800 the operator noticed that 22B safety injection tank (SIT) pressure
0 3 was less than 200 psig as required by T.S. 3.5.1.d. 22B SIT was repressur-
0 4 ized to greater than 200 psig at 0850. The three redundant SITs remained
0 5 operable during the event. This is not a repetitive occurrence.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
1 0 22B SIT pressure decreased due to minor valve leakage. The corrective action
1 1 was to repressurize the tank to greater than 200 psig. Corrective action to
1 2 prevent recurrence will be to caution operators as to the importance of main-
1 3 taining setpoints near their midpoints rather than at their limits.
