REPORT DATE

EVENT DESCRIPTION AND PROBABLE CONSEQUENCES	
02	During performance of a surveillance test on the control room habitability system,

03 | the pressure regulators for control room pressurization were observed cycling. The

04 | test was suspended and an investigation was commenced to determine the cause of the

05 malfunction. The cycling might have caused insufficient air capacity to pressurize

016 | control room for required hour. Pressurization fan was operable for backup.

10 The pressure controllers had been calibrated with nominal gain and reset values

1 1 instead of fine tuning the controllers which caused the valves to cycle. The

1 2 controls were tuned and the procedure revised to incorporate the exact gain and

1	3	reset values.
