EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | On January 22, 1979, during normal start up the reactor operated above 1% power for |
0 3 | more than 24 hours without CMPF being calculated during that period (T.S.4.1.b). Be- |
0 4 | cause personnel followed the normal control rod withdrawal sequence the reactor did |
0 5 | not exceed a limiting condition for operation. |
0 6 | |
0 7 | |
0 8 | |

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 Due to an extended period of low reactor power normal process computer operation was
1 1 not feasible. Upon reaching the minimum power for computer operation, however, a
1 2 problem developed which prevents CMPF calculation and the time limit was exceeded.
1 3 As soon as possible after the deadline the CMPF was calculated and proven to be with-
1 4 in limits. The responsible personnel were reinstructed on the process (continued)
