General Comment

Rolling back protections and safety standards related to nuclear power is a huge mistake. Though nuclear power plants in this country are generally safer than those in some other countries, they are all aging and pose catastrophic potential threats to the country and the planet. Therefore, protections and safety standards should be strengthened, not weakened. We currently have highly hazardous nuclear waste stored all around the country at risk of significant damage if something should ever happen.

What benefit would these proposed changes provide to the safety of operations? It seems like there is no valid, practical reason for them and I strongly oppose them. This is one area where safety should be the highest priority and the nuclear industry cannot be trusted to regulate themselves, so 330 million people in this country are relying on the federal government to keep them safe. So make the rules stricter and err on the side of protecting the people - not the industry.

Thank you,
