## General Comment

In the beginning it was said that "nuclear power would be so cheap it would hardly be worth charging for." Fast forward to today and we see how wrong that thinking was. Fukushima, Chernobly and others have taught us to be wary, very wary. No safe guards currently in place should be removed or minimized. Any new nuclear power plants must be made with the latest science applicable to nuclear power generation. There are ways to produce nuclear power today far better than what's been done in the past.
