Atomic Safety and Licensing Board  
Nuclear Regulatory Commission  
Landon Bldg. Rm 1209  
Washington D.C.

Dear Board.

Elizabeth - William - Glen.

I am concerned. I'm scared  
of nuclear power in general. In  
particular I'm scared about  
Diablo Canyon. Not only the  
earthquake problem - which is  
great - but also about waste disposal.

I am also puzzled. How can plants  
be closed down because of waste  
storage problems and then new  
plant get a licence?

My son is a fine young man.  
He faces jail and a extraordinary  
heavy fine plus 2 years probation  
because he protested the Diablo Plant.

7903140619

I have a lot of red neck drinking friends. They got talking about the protest and the results were surprising. They are all aware of the dangers involved. They are all concerned. They are all for the alliance. Every one here seems to think eventually Atomic power will come - but they feel there are not enough safe guards yet.

Most mistakes we can overcome - but nuclear waste is going to be around a long time. I guess you've heard the one about "Oh 15 million years? I thought you said 50 million years!" But with nuclear power it's no joke.

I'm sure you're responsible people and will do what's right. Your decision is forever. Please make it a good one.

Sincerely Dor Lee
