## General Comment

FACTS:

Russia - Chernobyl nuclear.

Japan - Fukushima nuclear accident.

Russian nuclear warhead accident - Nenokska Missile Test Site.

Possibility of earthquake hazard destabilizing nuclear plants in many states.

Possible nuclear accident in California would cause massive destruction of marine life, fishing, and California agriculture as the food bank of America - not to mention enormous population and financial losses. It's good to remember that California is also the USA's largest federal taxpayer.

Enormous potential for safe, renewable sources of power already exist and should be supported.

Without elaborating further on the above references, it is obvious to the even the least informed minds that continuing use of nuclear power facilities - much less deregulating them - is not only hazardous but

extraordinarily dangerous to the safety and security of the United States and her people, as well as to the the international community.
