## General Comment

Almost weekly, there is news of leaks, security issues and other failures at nuclear plants. These are the ones that make it into the public forum. The nuclear power industry is driven by profit, it cuts corners and is reckless because it knows it will not to be held accountable if there is an accident. The public on the other hand must live with the constant worry of an accident that may well leave them homeless, jobless and with deadly health consequences that are no fault of their own and which they will have no recourse for compensation.

The nuclear power industry has proven from the beginning that it cannot be trusted, instead of loosening the oversight of these aging and crumbling sites, the NRC should be stepping up the oversight.

"Clean, safe, too cheap to meter," the lie that has led to nuclear contamination throughout the country and ever higher electric bills because of these plants.
