1. GENERAL CRITERIA			Initials		
			a	b*	c#
a.	The operating test conforms to the previously approved outline; changes are consistent with sampling requirements (e.g., 10 CFR 55.45, operational importance, safety function distribution).		<u>JS</u>	<u>TNO</u>	<u>JS</u>
b.	There is no day-to-day repetition between this and other operating tests to be administered during this examination.		<u>JS</u>	<u>TNO</u>	<u>JS</u>
c.	The operating test shall not duplicate items from the applicants' audit test(s) (see Section D.1.a.)		<u>JS</u>	<u>TNO</u>	<u>JS</u>
d.	Overlap with the written examination and between different parts of the operating test is within acceptable limits.		<u>JS</u>	<u>TNO</u>	<u>JS</u>
e.	It appears that the operating test will differentiate between competent and less-than-competent applicants at the designated license level.		<u>JS</u>	<u>TNO</u>	<u>JS</u>
2. WALK-THROUGH CRITERIA					
a.	Each JPM includes the following, as applicable: <ul style="list-style-type: none"> • initial conditions • initiating cues • references and tools, including associated procedures • reasonable and validated time limits (average time allowed for completion) and specific designation if deemed to be time critical by the facility licensee • specific performance criteria that include: <ul style="list-style-type: none"> - detailed expected actions with exact criteria and nomenclature - system response and other examiner cues - statements describing important observations to be made by the applicant - criteria for successful completion of the task - identification of critical steps and their associated performance standards - restrictions on the sequence of steps, if applicable 		<u>JS</u>	<u>TNO</u>	<u>JS</u>
b.	Ensure that any changes from the previously approved systems and administrative walk-through outlines (Forms ES-301-1 and 2) have not caused the test to deviate from any of the acceptance criteria (e.g., item distribution, bank use, repetition from the last 2 NRC examinations) specified on those forms and Form ES-201-2.		<u>JS</u>	<u>TNO</u>	<u>JS</u>

					a	b*	c#				
1. The initial conditions are realistic in that some equipment and/or instrumentation may be out of service, but it does not cue the operators into expected events.					Joh	TNO	JS				
2. The scenarios consist mostly of related events.					Joh	TNO	JS				
3. Each event description consists of the following: <ul style="list-style-type: none"> the point in the scenario when it is to be initiated the malfunction(s) or conditions that are entered to initiate the event the symptoms/cues that will be visible to the crew the expected operator actions (by shift position) the event termination point (if applicable) 					Joh	TNO	JS				
4. The events are valid with regard to physics and thermodynamics.					Joh	TNO	JS				
5. Sequencing and timing of events is reasonable and allows the examination team to obtain complete evaluation results commensurate with the scenario objectives.					Joh	TNO	JS				
6. If time compression techniques are used, the scenario summary clearly so indicates. Operators have sufficient time to carry out expected activities without undue time constraints. Cues are given.					Joh	TNO	JS				
7. The simulator modeling is not altered.					Joh	TNO	JS				
8. The scenarios have been validated. Pursuant to 10 CFR 55.46(d), any open simulator performance deficiencies or deviations from the referenced plant have been evaluated to ensure that functional fidelity is maintained while running the planned scenarios.					Joh	TNO	JS				
9. Scenarios are new or significantly modified in accordance with Section D.5 of ES-301.					Joh	TNO	JS				
10. All individual operator competencies can be evaluated, as verified using Form ES-301-6 (submit the form along with the simulator scenarios).					Joh	TNO	JS				
11. The scenario set provides the opportunity for each applicant to be evaluated in each of the applicable rating factors. (Competency rating factors as described on Forms ES-303-1 and ES-303-3.)					Joh	TNO	JS				
12. Each applicant will be significantly involved in the minimum number of transients and events specified on Form ES-301-5 (submit the form with the simulator scenarios).					Joh	TNO	JS				
13. Applicants are evaluated on a similar number of preidentified critical tasks across scenarios, when possible.					Joh	TNO	JS

Instructions:

1. Check the applicant level and enter the operating test number and Form ES-D-1 event numbers for each event type; TS are not applicable for RO applicants. ROs must serve in both the at-the-controls (ATC) and balance-of-plant (BOP) positions. Instant SROs (SRO-I) must serve in both the SRO and the ATC positions, including at least two instrument or component (I/C) malfunctions and one major transient, in the ATC position. If an SRO-I *additionally* serves in the BOP position, one I/C malfunction can be credited toward the two I/C malfunctions required for the ATC position.
2. Reactivity manipulations may be conducted under normal or *controlled* abnormal conditions (refer to Section D.5.d) but must be significant per Section C.2.a of Appendix D. (*) Reactivity and normal evolutions may be replaced with additional I/C malfunctions on a one-for-one basis.
3. Whenever practical, both instrument and component malfunctions should be included; only those that require verifiable actions that provide insight to the applicant's competence count toward the minimum requirements specified for the applicant's license level in the right-hand columns.
4. For new reactor facility licensees that use the ATC operator primarily for monitoring plant parameters, the chief examiner may place SRO-I applicants in either the ATC or BOP position to best evaluate the SRO-I in manipulating plant controls.
