I am writing this e-mail, asking the NRC to consider extending the Environmental Assessment license for no more than 10 years instead of 40 years proposed to Westinghouse. There have been several incidents at the plant recently (problem with a scrubber, drum fire, spiking station issues). The Lower Richland community wants better oversight of the air and water quality levels around Westinghouse. We want dhec to continue to test for uranium levels released into the atmosphere (within limits/standards for federal and state air quality regulations). The soil samples collected around the sea land containers should continue to be analyzed. We ask for dhec and the NRC to be notified as soon as possible of any malfunction of equipment or system at the plant that release hazardous chemicals &/or gases (VOC's). We're asking for the NRC to not reduce the number of inspections at Westinghouse.

The LR community wants better oversight of the wastewater discharge – continue to test for high levels of nitrate-nitrogen, uranium and technetium-99 in the treatment system. We know that there have been liner issues (more inspections). A more detailed wastewater treatment pond operation is needed.

We are opposed to granting Westinghouse a 40 year license renewal. Stating that there would not be a significant impact from Westinghouse continuing to operate another 40 years is inaccurate. Additionally, we want the NRC to extend the comment period to January 31, 2020. By granting an extension, additional residents will be encouraged to e-mail their comments regarding granting Westinghouse a 40 year license renewal.
