Subject: U.S. NRC RML #13-18945-01

Mr. Foli:

I am working on the amendment to your company's U.S. NRC Radioactive Material License No. 13-18945-01. In addition to adding you as the Radiation Safety Officer, I will be making several updates in the formatting of the license. The licensee will look quite a bit different once issued because we are moving from a portrait orientation to a landscape orientation for the license. Additional changes and updates will be made to some of the license conditions as well. I will include a summary of the changes in a cover letter transmitted with the license.

Among the changes I need to make is to specifically identify each of your authorized Fixed Gauging Devices. You are currently authorized for the Thermo Process Instruments, LP (formerly Texas Nuclear Corporation) Model 5190 Source Holder and the Kay-Ray, Inc., Model 7062P Source Holder.

I need to know the number of each of these gauges that you require authorization to possess. If possible, please also identify the Source Manufacturer and Model Number for the Sealed Sources in these devices. If possible, please include a copy of your latest Inventory of Radioactive Material. You may respond to me via facsimile. As a note, I will be out of the office, but if you have questions I may be able to respond by e-mail next week, but will be in training most of the week.
