EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 | On February 11, 1981, it was noted that Electrical Penetration No. EMV-2

03 | had a pressure reading of 0 PSIG. After several attempts to fill the

04 | penetration with SF₆ gas, it was determined that the penetration could not

05 | be pressurized. A 10CFR50.59 evaluation was performed, and it was determined

06 | that operation with only a single containment barrier was permissible and was

07 | not an unreviewed safety question.
