File: 3-B-5-a

Mr. Harold R. Denton
Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Subject: Crystal River Unit 3
Docket No. 50-302
Operating License No. DPR-72
NUREG 0737 - Item II.D.1
Safety and Relief Valve Testing Program

Dear Mr. Denton:

NUREG-0737, Clarification of TMI Action Plan Requirements, Item II.D.1 requires a safety and relief valve testing program to qualify reactor coolant safety and relief valves under expected transient and accident conditions. It further requires a report on the results of this testing and plant specific submittals confirming the adequacy of safety and relief valves, based on the test program, by July 1, 1981. This submittal satisfies for Florida Power Corporation that requirement for all testing completed through June 19, 1981.

By letter dated July 1, 1981, R. C. Youngdahl (Consumers Power Co.) transmitted the Interim Data Report for the EPRI PWR Safety and Relief Valve Test Program. This report summarizes the test data collected to date on relief and safety valves. Crystal River Unit 3 has a Dresser Industries Model 31533VX-3 Electromatic Relief Valve and two Dresser Industries Model 31739A safety valves. Relief and safety valves representative of the above valves are being tested as part of the EPRI program.

We will submit evaluations and other plant specific data by August 7, 1981.

Very truly yours,

Patry J. Baynard
