Subject: Calvert Cliffs Nuclear Power Plant
Units Nos. 1 & 2; Dockets Nos. 50-317 & 50-318
Response to NUREG-0737

- References: (a) Letter from A. E. Lundvall, Jr. to D. G. Eisenhut dated December 15, 1981.
(b) Telecon between C. McCracken (NRC) and S. J. Willats (BG&E) on March 21, 1981.
(c) Telecon between C. McCracken (NRC) and S. J. Willats (BG&E) on March 24, 1981

Gentlemen:

In our initial response to NUREG-0737, reference (a), we declined to commit to performing a post-accident chloride analysis as required by Item II.B.3. Our position was that immediate analysis was unnecessary and the concomitant radiation dose to the individual conducting the sample would therefore be unjustified. We understand that chloride analysis may provide useful information for evaluating the potential for chloride stress corrosion, and that this information may be needed before startup can be contemplated. Therefore, we will install post-accident chloride sampling capability.

As a result of telephone conversations between Mr. C. McCracken and Mr. S. J. Willats (references (b) and (c)), we have learned that you still believe that the chloride samples must be performed as originally specified in NUREG-0737 in spite of ALARA considerations. Therefore, we will no longer take exception to the requirements of Item II.B.3.

Sincerely,

cc: J. A. Biddison, Esquire
G. F. Trowbridge, Esquire
Messrs. E. L. Conner, Jr. - NRC
R. E. Architzel - NRC Resident Inspector
