EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 With the unit at cold shutdown, informed by Vepco Fuel Resources Department that
 03 recent analysis of loss of main feedwater with 3 RCP's in operation requires a
 04 minimum of 500 gpm of APW flow to meet the PSAR acceptance criteria. This is con-
 05 trary to PSAR Section 14.2.13, which indicates that one motor driven APW pump (350
 06 gpm) is sufficient. This is reportable per T.S.6.6.2.a (8), and is also applicable
 07 to Unit 2.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

18 Original PSAR analysis assumed a loss of offsite power, and no RCP's operating, in
 19 conjunction with a loss of main feedwater. Recent analysis reveals case with RCP
 20 heat to be more limiting. Operators will be instructed to either obtain required
 21 APW flow from additional pumps on the affected unit or the APW crosstie from the
 22 opposite unit; or to secure all RCP's within 10 minutes following LOFW.
