

United States Senate

WASHINGTON, D.C. 20510

July 13, 1981

Mr. Carlton Kammerer
Director of Congressional Affairs
Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Kammerer

The League of Women Voters of San Luis Obispo has shared with me a June 1, 1981 letter to the NRC regarding the licensing of the Diablo Canyon nuclear power plant.

Commenting on the possible issuance of a low-power license for the plant, the League expresses concern about the adequacy of emergency procedures and public information on those procedures; Pacific Gas & Electric's compliance with all TMI safety-related requirements; and the policy for granting a full-power license once a low-power license has been issued. In the letter, the League also requests specific additional information re TMI safety issues and procedures for full-power licensing.

I hope the Commission will respond carefully and promptly to the questions submitted by the San Luis Obispo League, which raise concerns of general public interest.

I'd appreciate receiving a copy of the NRC response to the League's inquiries, and hope the Commission will give careful consideration to the issues the League raises.

Many thanks.

Sincerely,

Alan Cranston
