SUBJECT: BEAVER VALLEY POWER STATION - UNIT NO. 2
IE Bulletin 81-02
Docket No. 50-412
Failure of Gate Type Valves to Close Against Differential Pressure

Gentlemen:

Pursuant to the requirements of 10CFR50.55(e), we reported to your office on October 29, 1980, a significant deficiency, SDR 80-06, of problems with three-inch gate valves manufactured by the Westinghouse Electro-Mechanical Division. We provided you an interim report on November 20, 1980.

Additionally, the information requested in IE Bulletin No. 81-02 has just been supplied to you in "Interim Report No. 2 on 3" and 4" MOV Gate Valves in Safety Injection and Chemical and Volume Control System at Beaver Valley Power Station - Unit No. 2", attached to my letter to you dated July 13, 1981.

As requested by this bulletin, we estimate approximately forty (40) manhours were expended in developing this response. No estimate of man-days is presently available for implementing corrective action.
