EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

01 On June 6, 1981, while in Mode 5, the flow rate measurement instrumentation on

02 waste monitor tank (WMT) "A" was declared inoperable during an attempted

03 liquid waste release (LWR). This was a violation of Technical Specification

04 3.3.3.8 and reportable per Technical Specification 6.9.1.13B and is similar

05 to previous RO #'s 81-66 and 81-94. Because of the availability of other re-

06 lease measuring methods, this incident did not adversely affect the health and

07 safety of the public or the safe operation of the plant.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 Repairing a minor water leak required the temporary closing of the supply air

11 isolation valve to the WMT "A" flow transmitter. This valve was inadvertently

12 left closed after completion. The LWR was immediately terminated and later

13 released per action statement 31 of Technical Specification 3.3.3.8. The

14 valve was opened and the instrument declared operational on June 8, 1981.
