

July 27, 1981

In addition to the attached Compromise Solution, I would like to ask you a few questions:

1. Is the engineer who stated that Diablo could safely withstand a major earthquake the same one who inspected the Hyatt Hotel in Kansas City?
2. Do you believe that citizens of this country should have some control over what is built in their immediate environment?
3. Can you state categorically that you have found a way to store and transport nuclear waste and decontaminate the building which houses Diablo which is no longer being used?
4. Since money seems to be the major concern to both the NRC and PG&E, are you willing to put your financial guarantee where your mouth is?
