Log: CN-137

Gentlemen:

The Georgia Power Company wishes to submit the following information concerning the violation discussed in your inspection reports 50-424/81-06 and 50-425/81-06.

We concur with the finding identified concerning failure to control concrete vibration. The reason for failing to follow the vibrator spacing requirements of procedure CD-T-02 was due to congestion of pipe sleeves, insert plates, etc., in pour number A-08B-049.

Our civil contractor, Walsh Construction Company, initiated a training class for concrete placement crews on June 9, 1981. Topics included "Causes of Voids", "Common Location of Voids", "Concrete Placing Methods", "Consolidation of Concrete", etc. Georgia Power Engineers and QC inspectors will attend, as applicable. The Civil Project Section Supervisor notified the Walsh Construction Project Manager of instructions for use of pencil vibrators in a letter dated June 8, 1981, and a Field Procedure Change Notice was generated on June 20, 1981, to CD-T-02 on the use of pencil vibrators.

Quality Control and Area Engineers will increase their monitoring for proper vibration as prescribed by CD-T-02. Immediate corrective steps shall be instituted should they detect problems.

Full compliance was achieved June 29, 1981.

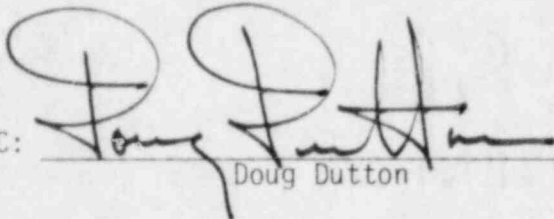

Neither the inspection report nor this reply contain any proprietary information and may be placed in the NRC's Public Document Room.

Very truly yours,

Doug Dutton  
Project General Manager
