U.S. Nuclear Regulatory Commission
Washington, DC 20555

Docket No. 50-267

Subject: Primary Coolant Auxiliary
System Loop Split Modification

Dear Mr. Kuzmycz:

Attached (30 copies) is the Safety Analysis Report for the Primary Coolant Auxiliary System Loop Split Modification to be installed at Fort St. Vrain. The design of the subject modification was presented to the NRC at the November 1, 1979 and January 27, 1981 meetings held at the Fort St. Vrain Site. This Safety Analysis Report has been reviewed by the Fort St. Vrain Plant Operating Review Committee, and the committee has determined that the modification is not safety significant and that it does not represent an unreviewed safety question. Installation of the subject modification is presently scheduled to begin in September 1981 and should be completed by the end of December 1981.

If you have any questions, please contact me.

Very truly yours,

H. L. Brey, Manager
Nuclear Engineering Division
