Re: Docket No. 50-275
Diablo Canyon Unit 1

Dear Mr. Engelken:

Our letter to you dated April 3, 1981 indicated that the final report on the surveillance and testing of mechanical snubbers for use with safety-related systems would be provided by June 30, 1981.

Inspection and stroking of mechanical snubbers on Unit 1 began on February 2, 1981 and, to date, in excess of 95% have been inspected and tested. The remaining safety-related snubbers, primarily those in the Containment and the Auxiliary Building, will be inspected and tested prior to fuel loading. Our final report will be submitted within 30 days of completion of this work, as required by IE Bulletin 81-01.

Very truly yours,

Philip A. Crane, Jr.
