EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 While investigating the event being reported in LER 2-81-83, where the RCIC System auto-

0 3 matically isolated, it was discovered that the indication for the RCIC System steam line

0 4 area ambient temperature switch, 2-E51-TS-N603A, Model No. 86PTGF, was failed downscale.

0 5 The instrument, Model No. 86PTGF, actuates the "steam leak detection ambient temperature

0 6 high" annunciator and initiates an RCIC isolation on a high temperature. This event

0 7 did not affect the health and safety of the public.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 A cold solder joint in the module circuitry prevented the instrument from performing

1 1 its function. The joint was resoldered and tested and the module was calibrated and

1 2 returned to service. No reason could be determined for the failed joint which was made

1 3 by the module manufacturer. As plant documentation shows this event is isolated, no

1 4 further action is required.
