JAN 13 2020

Sabah Toma
Radiation Safety Officer
TES Consultants, P.C.
23943 Industrial Park Drive
Farmington Hills, MI 48335

Dear Mr. Toma:

Enclosed is Amendment No. 14 renewing your U.S. NRC Materials License No. 21-32150-01 in accordance with your request.

In accordance with your revised license application dated November 26, 2019, your possession limits have been adjusted to authorize up to four (4) Troxler Electronic Laboratories, Inc., Model 3400 Series portable gauging devices. You are not authorized for any additional models beyond those identified above. If you should require an increase in number of authorized gauging devices or to allow for possession of other manufacturer and model numbers, an amendment to your license will be required.

You have relocated your storage location at your permanent facility. As required by Title 10 Code of Federal Regulations (10 CFR) §30.32(i), ensure that you always secure portable gauges placed in storage using a minimum of two physical controls from unauthorized removal. Further, update your individual members of the public dose compliance study to ensure that annual radiation doses do not exceed 100 millirem and that unrestricted area doses do not exceed 2 millirem in any one hour as specified in 10 CFR §20.1301.

Note that 10 CFR §30.36(d) requires that written notification be provided to the NRC in the event that no licensed activities have been conducted for a period of 24 months.

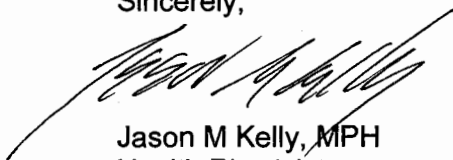

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region III office at (630) 829-9887 so that we can provide appropriate corrections and answers.

You will be periodically inspected by NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Statement of Policy and Procedure for NRC Enforcement Actions. Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

The NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement and not a regulation, it sets forth the agency's *expectations* for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on NRC's safety culture Web site at <http://www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html>. We strongly encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in NRC-regulated activities.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be available electronically for public inspection in the NRC Public Document Room or from the NRC's Agencywide Documents Access and Management System (ADAMS), accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

Sincerely,

Jason M Kelly, MPH
