

United States Nuclear Regulatory Comm.  
Washington, D.C.

Dear Sir;

During my 19 month tenure as a security guard at the Perry Nuclear Power Plant in Perry, Ohio I saw many incidents which I feel you should be concerned with. They are as follows:

1. Several guards have, and may still, consume narcotics (marijuana and amphetamines) while on duty -

A few guards have -

a. found unsecured contractor facilities and unlawfully removed items for personal use -

b. forcibly entered facilities and unlawfully removed items for personal use -

3. A shift supervisor left the project to go flying in a friends air-plane during a day when there was a critical man-power shortage.
4. The project fire engine has many discrepancies which may effect its operation if, and when, required. This has been brought to the attention of the security department on several occasions and ignored.
5. Guards have been permitted to sleep on duty when the shift supervisor was aware of such actions.

These are just five of the many problems within the security administration of this plant. I, as a defender of nuclear power, would appreciate your concern into these matters. I am fully willing to take a polygraph test in regards to these allegations. Expecting your reply, it is my pleasure to remain,

Respectfully Yours
