## I. INTRODUCTION

In accordance with the Unique Reporting Requirements of Technical Specification 6.9.3., this report summarizes the Effluent Release Data for Peach Bottom Atomic Power Station Units 2 and 3 for the period July 1, 1982 thru December 31, 1982. The notation P and N are used to denote positive and negative exponents to the base 10.

The release of radioactive materials during the reporting period were within the Technical Specification limits. Specifically, the average liquid radioactive release for the reporting period was 12.6% of the permissible limit; the maximum noble gas release was 7.66% of the permissible limit and; the average iodine release was 0.119% of the permissible release.

This report has been revised to include the unmonitored release which occurred in October as a result of a leak in the 3D RHR Heat Exchangers.

SUBJECT: Report of Semi-Annual Effluent Releases  
No. 14, Revision 1, July 1, 1982,  
through December 31, 1982, Peach Bottom  
Atomic Power Station Unit Nos. 2 and 3

Dear Mr. Allan:

Enclosed are two copies of the Semi-Annual Effluent Releases Report No. 14, Revision 1, July 1, 1982, through December 31, 1982, for Peach Bottom Atomic Power Station Unit Nos. 2 and 3, which has been revised to include the unmonitored release that occurred in October, 1982, as a result of a leak in the 3D RHR Heat Exchanger. The unmonitored release was omitted from the original submittal of Report No. 14 as identified by the Nuclear Regulatory Commission site inspector.

Revision 1 of this report is being submitted in compliance with the Technical Specifications of Operating Licenses DPR-44 and DPR-56 and to fulfill the requirements of Regulatory Guide 10.1.

Very truly yours,

W. M. Alden
