**RICHARD P. CROUSE**  
Vice President  
Nuclear  
(419) 259-5221

Director of Nuclear Reactor Regulation  
Attention: Mr. John F. Stolz  
Operating Reactor Branch No. 4  
Division of Operating Reactors  
United States Nuclear Regulatory Commission  
Washington, DC 20555

Dear Mr. Stolz:

Under separate cover, we are transmitting three (3) original and forty (40) conformed copies of an application for Amendment to Facility Operating License No. NPF-3 for the Davis-Besse Nuclear Power Station Unit No. 1.

This application requests that the Davis-Besse Nuclear Power Station Unit 1 Technical Specifications, Appendix A, be revised to reflect the changes attached. The proposed changes involve Technical Specifications contained in Cycle 4 Reload Report BAW-1783 May 1983.

The attachment identifies the changes, Safety Evaluation and Significant Hazards Consideration for the Cycle 4 Reload Report and the supporting accident/transient analysis are included in the Reload Report (BAW-1783 May 1983).

The Cycle 4 physics parameters resemble the values presented in the Cycle 2 Reload Report and the BOC values given in the Cycle 3 Reload Report. Upon completing a revision to the Cycle 4 Reload Report to include APSR withdrawal and coastdown at the end of cycle (EOC), the revised Cycle 4 Reload Report will resemble the Cycle 3 Reload Report. Work is currently underway to revise the Cycle 4 Reload Report to incorporate APSR withdrawal and coastdown at EOC and is to be submitted at a later date.

This amendment request involves a change of Class IV type. Enclosed is a check for \$12,300 as requested by 10 CFR 170.22.

Very truly yours,

RPCrouse / TDM
