Mr. Robert A. Clark, Chief  
U. S. Nuclear Regulatory Commission  
Office of Nuclear Reactor Regulation  
Division of Licensing  
Operating Reactors Branch No. 3  
Washington, D.C. 20555

Reference: Docket No. 50-285

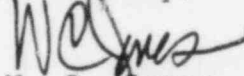

Dear Mr. Clark:

Adequacy of the Fort Calhoun Station  
Electrical Distribution System Voltages

In a letter to the Commission, dated April 22, 1983, Omaha Public Power District stated that results from an updated load flow analysis would be available in 90 days. The analysis is now approximately 85% complete and the District expects to have the results ready for submittal in 30 days.

The delay in the load flow analysis will subsequently delay the submittal of the projected minimum grid voltage and the resultant bus voltage at the battery chargers and degraded voltage relays. This information is expected to be available by September 15, 1983.

Sincerely,

W. C. Jones  
Division Manager  
Production Operations
