STAMIRIS ADDENDUM TO 8/24/82 COST/BENEFIT CONTENTION:  
DEWATERING COSTS

The cost/ benefit balance to the public of operating the Midland plant cannot be valid without taking account of the projected operation and maintenance costs of the permanent dewatering system.

There is no mention of dewatering cost considerations in the DES or FES analyses. The anticipated deterioration, possible repair and or replacement of wells must be projected in addition to routine operating expenses. This unique aspect of Midland's operation is a significant factor in the cost / benefit analysis which warrants consideration and explanation. (If already included in operating expenses, these dewatering costs should be delineated.)
