RE: Docket No. 50-276

Dear Mr. Thomas:

I am writing to request exemption from the requirement to have an Emergency Plan for the Georgia Tech AGN-201 Reactor, Facility License R-111, as specified in 10CFR 50.54(r).

The AGN-201 was last operated in June, 1979, and has been in a shut down and de-energized condition since then. We are in the process of preparing final plans and a request for authority to decommission the reactor in the very near future. In fact, the fuel and in-core neutron source are currently being moved to the fuel storage vault of the Georgia Tech Research Reactor Facility and will be in place there before November 1, 1982.

The need to prepare an Emergency Plan, which will only be in effect for a very limited time, and for a shut down and de-fueled facility at that, will delay the preparation of our decommissioning plans and it is on that basis that I request relief.

If you have any questions, I will be glad to try to answer them.

Respectfully yours,

J. Narl Davidson
AGN-21 Reactor Supervisor
