Attn: Director, Division of Licensing

Re: Docket No. 50-538

Gentlemen:

Pursuant to 10 CFR 50.54(r), as amended effective May 6, 1982, an upgraded Emergency Plan prepared October 15, 1982 for the Memphis State University (MSU) AGN-201 Reactor Facility is hereby submitted for your review and approval.

Your generic letter of June 16, 1982, to all research and test reactor licensees requested that licensees use Revision 1 to Regulatory Guide 2.6 (for comment) and ANSI/ANS-15.16 (Draft II dated November 29, 1981) together with NUREG-0849 to meet 10 CFR 50.54(r) requirements. To the extent possible, these documents were used as guidelines to develop the upgraded MSU Emergency Plan. Some variations from the standardized guidelines were necessary, however, to realistically reflect characteristics that are unique to the AGN-201 Reactor and MSU facility. If you have any questions, please contact the Reactor Facility Emergency Preparedness Coordinator at (901) 454-2687.

Sincerely,

D. W. Jones
Director
