September 30, 1982

Mr. Ronald C. Haynes, Administrator
U. S. Nuclear Regulatory Commission
Office of Inspection and Enforcement
Region I
631 Park Avenue
King of Prussia, Pennsylvania 19406

Dear Mr. Haynes:

NRC INSPECTION REPORT 50-354/82-05
NO. 1 UNIT
HOPE CREEK GENERATING STATION

By letter dated June 14, 1982, we advised you of our planned actions in response to the subject NRC Inspection Report. We also stated that implementation problems with W-H Constructors' QA program were being addressed on a generic basis with W-H by Bechtel Power Corporation.

Subsequently, we resolved our concerns with W-H's program implementation by transferring the responsibility for first-line inspection activities for HVAC installations from W-H Constructors to Bechtel. Consequently, Bechtel will be performing those reinspection activities outlined in our June 14, 1982 letter which were to have been performed by W-H. This transfer of responsibility also necessitates changing the completion date for the reinspection activities to November 19, 1982.

The results of the reinspection will be made available to your Resident Inspector.

Very truly yours,

R. C. Haynes
