Subject: Waterford 3 SES
Docket No. 50-382
License No. NPF-38
Completion Date for NRRGL 89-10 MOV Program

Gentlemen:

In accordance with your verbal request, the purpose of this letter is to docket a completion date for the Waterford 3 activities mandated by NRR Generic Letter 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance".

As you know, item 'i' of NRRGL 89-10 established a requirement that all design-basis reviews, analyses, verifications, tests and inspections required by the letter be complete "within five years or three refueling outages of the date of this letter [June 28, 1989], whichever is later."

The Louisiana Power and Light (LP&L) response to NRRGL 89-10 indicated that "as required by [the Generic Letter], LP&L will complete all design-basis reviews, analyses, verifications, tests and inspections to comply with items 'a' through 'h' by the end of Waterford 3's sixth refueling outage." A specific date was not provided.

As reflected in NRC Inspection Reports 50-382/92-02 dated February 21, 1992, and 93-06 dated May 18, 1993, Entergy Operations intends to complete all NRRGL 89-10 required actions at Waterford 3 by June 28, 1994. This

schedule is consistent with the requirements of the generic letter and, as such, has been characterized as acceptable in the cited inspection reports.

If you have additional questions or require further assistance, please contact T.W. Gates at (504) 739-6697.

Very truly yours,
