Docket No. 52-002

Attn: Document Control Desk
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Subject: System 80+ 10CFR51 Technical Support Document

Dear Sirs:

Enclosed is a copy of a Technical Support Document for amendments to 10 CFR Part 51 considering severe accidents under the National Environmental Policy Act for plants of System 80+ design.

This document provides the technical basis for determining the status of severe accident closure under NEPA for the System 80+ design. It concludes that there is an adequate technical basis for closure of severe accidents under NEPA for System 80+. It is expected that the technical basis and the conclusions will be codified in the form of proposed amendments to 10 CFR Part 51.

If you have questions, please call me or Mr. Stanley Ritterbusch at 203-285-5206.

Very truly yours,

COMBUSTION ENGINEERING, INC.
