JAN 29 2020

Michael Matthews
Radiation Safety Officer
Plastatech Engineering, Ltd.
725 Morley Dr.
Saginaw, MI 48601

Dear Mr. Matthews:

Enclosed is Amendment No. 11 to your NRC Materials License No. 21-26714-01 in accordance with your request.

Your license has been amended to reflect your appointment as Radiation Safety Officer (RSO). Further, your license authorization and possession limits have been modified to remove the open-ended license authorizations, while retaining a possession limit that is adequate to accommodate the number of gauging devices in your possession. Carefully review your license authorizations to ensure that the possession limits are adequate to accommodate your current inventory of gauging devices along with any immediate needs that you may have to add one or more of the gauging devices. Notify this office as soon as possible if your license authorizations need to be adjusted.

As discussed in our conversation on January 27, 2020, in order to proceed with adding Crint LaBrosse as the Alternate RSO, please confirm that he will only act in this capacity on a temporary basis in the absence of the appointed RSO. Please note that, your organization can internally assign or delegate RSO tasks to other qualified individuals to perform without a need to submit an amendment request. However, the responsibility for those tasks lies with the RSO. If you provide a response, please state in the response that the additional information pertains to Control Number 616867.

Please ensure that all future correspondence is signed by a certifying official or an individual who has been delegated authority to make legally binding statements on behalf of your company.

Note that your license format has been changed based on our Web-Based License System. Additional changes to the following license conditions were also made based on our licensing policy:

Condition 13 regarding the sealed source leak test requirement;

Condition 15 regarding the inventory requirement, including changing the record retention requirement from five years to three years; and

Condition 20 regarding the periodic testing of the on-off mechanism (shutter) and indicator, including the inclusion of a record retention interval of three years.

Finally, note that the former Condition 25 pertaining to the transportation requirement that had appeared in amendment number 10 of your license was deleted. This does not relieve you from compliance with the transportation requirements. This condition was deleted because it was redundant to the regulatory requirements already specified in Title 10 Code of Federal Regulations, Part 71, "Packaging and Transportation of Radioactive Material."

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the U.S. Nuclear Regulatory Commission, Region III office at (630) 829-9887 so that we can provide appropriate corrections and answers.

You will be periodically inspected by NRC. Failure to conduct your program in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in enforcement action against you. This could include issuance of a notice of violation, or imposition of a civil penalty, or an order suspending, modifying or revoking your license as specified in the General Statement of Policy and Procedure for NRC Enforcement Actions. Since serious consequences to employees and the public can result from failure to comply with NRC requirements, prompt and vigorous enforcement action will be taken when dealing with licensees who do not achieve the necessary meticulous attention to detail and the high standard of compliance which NRC expects of its licensees.

The NRC's Safety Culture Policy Statement became effective in June 2011. While a policy statement and not a regulation, it sets forth the agency's *expectations* for individuals and organizations to establish and maintain a positive safety culture. You can access the policy statement and supporting material that may benefit your organization on NRC's safety culture Web site at <http://www.nrc.gov/about-nrc/regulatory/enforcement/safety-culture.html>. We strongly encourage you to review this material and adapt it to your particular needs in order to develop and maintain a positive safety culture as you engage in NRC-regulated activities.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be available electronically for public inspection in the NRC Public Document Room or from the NRC's Agencywide Documents Access and Management System (ADAMS), accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html>.

Sincerely,

Jason M Kelly, MPH
