Dear Mr. Palladino:

**THE DIABLO CANYON PLANT MUST NEVER OPEN!**

This reactor is sited only 3 miles from an earthquake fault, discovered after construction began.

Why did not the NRC stop construction immediately?

Now a major flaw involving the stress analysis of pipe supports has been found. This flaw may affect the ability to withstand earthquakes -- which occur periodically along the Pacific coast.

The PG & E Company, the builder has announced an indefinite delay.

**HOW COULD IT BE THAT THIS PLANT WAS ISSUED A LICENSE?**

**WHAT KIND OF INSPECTION DOES THE NRC DO?**

Your credibility is zero. You didn't inspect a major diagram. You weren't even able to find a major design flaw.

The Diablo Plant has a dozen other problems, including evacuation and plant security.

**NO WONDER THOUSANDS OF DEMONSTRATORS WERE ANGRY THAT YOU DARE ISSUE A LICENSE.**

You have callously put the 2.3 billion dollars of the industry before the life of the citizens you are supposed to protect.

**YOU MUST NEVER ALLOW THE DIABLO CANYON PLANT TO START-UP!**

Sincerely,
