Nuclear Regulatory Commission:

Dear Sir,

The reason for this letter is about the Diablo Canyon nuclear power plant facility. I feel this plant is unsafe because it is located near an offshore earthquake fault. We don't need another Nuclear Plant, not that we don't need the energy that it could produce, but because of the dangers it might impose on people and the environment. In case of a disaster it could endanger the lives of people as far away as Los Angeles and San Francisco. It is just too big of a risk to take. Why should we risk hurting our environment and ourselves?

Yours Very Truly,

RALPH ORTIZ
