November 12, 1981

Director Nuclear Reactor Regulation  
Nuclear Regulatory Commission  
Washington, D. C. 20555

Dear Sir:

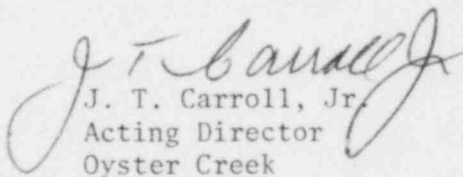

Subject: Oyster Creek Nuclear Generating Station  
Docket No. 50-219  
Technical Specification Change  
Request No. 95

The contractor responsible for designing and developing our overhead grid spargers has experienced some delays in the development of essential documents associated with that project. For this reason, performance evaluation, and proposed technical specification changes will be sent to you no later than January 4, 1982. We had indicated during the April 15, 1981 meeting with you in Bethesda that this information would be made available to you in the early Fall of 1981.

In the event that any questions or comments arise regarding this item, please contact Mr. J. Krubel of my staff at (201) 299-2264.

Very truly yours,

  
J. T. Carroll, Jr.  
Acting Director  
Oyster Creek
