

DOCKETED

October 15, 1981

81 OCT 21 P5:35

Dear PWR, and the

OFFICE
DOCKSECRETARY
SERVICE

I am extremely upset at your attitude towards the protesters at Diablo Canyon. For every one of those people who were willing to lay their bodies down to prevent the operation of the nuclear power plant, there is five thousand more back home who are cheering them on for their courage and commitment. They gave up a lot to be there. They lost the security of their families and homes and lost pay off of their jobs, to speak out about the dangers of that nuclear facility. It's time that you started waking up to the massive, growing anti-nuclear movement that is sweeping this country and the world. Your greedy corporate profits are not going to do you any good when you and your children are dying from cancer and radiation sickness. What makes you think that you will be spared from the effects of all of your radioactive, poisons that you are planning to spew into the environment?

And the secret is exposed: Nuclear power plants are really bomb factories. They are really there to make plutonium for bombs. You can't fool us any longer. If you really cared about providing your customers with safe, clean energy, you would be putting all of your investments and time into developing wind and solar energy. We don't need any more bombs! There are enough to kill everyone on the earth many times.

I am definitely against you operating the Diablo Canyon plant. It is not safe!!! And because it is so close to an earthquake fault, it can never be safe. There is no evacuation plan and there is no safe method for storing the radioactive wastes for thousands of years. There is a huge amount of evidence that low level radiation causes cancer, so that means that you are responsible for many, many cancer deaths whenever you are operating any nuclear plant. You just cannot contain the radioactive poisons in the plant with 100% efficiency.

People will not be able to pay the price of this nuclear mistake. Why should we pay for our own death anyway?

A very dissatisfied customer,

Arlene Reeves

Dear Regional Water Quality Control Board,

I was absolutely shocked when I read about PG&E's application to dump its poisons into Diablo Cove. I thought for sure that it was a misprint. Surely they didn't mean pounds per day, they must have meant pounds per year. NO.... they really meant pounds per day!!! Not only are they going to poison the marine life with Iodine 131, Strontium, Radium, Plutonium, Tritium and other radioactive elements, but they also want to poison them with arsenic, cadmium, chromium, copper, lead, mercury, chlorinated pesticides and PCBs, nickel, silver, zinc, cyanide, phenolic compounds, and ammonia!!! And in thousands of pounds per day!!

I am definitely against this kind of poison dumping into our ocean. These poisons accumulate in the plant and animal life and eventually they end up in our bodies when we eat the fish and shellfish.

It is outrageous that PG&E is trying to get away with this. They have no right to pollute our bodies with radiation and poisons!! There is no amount of corporate profit that is worth the life of even one human life. Murder is against the law! They are trying to murder all of us, for their own personal profits.

Please think over this problem carefully. It may be your child who dies from their poisons. Please speak against their policies of toxic dumping.

A very concerned parent,

Arlene Reeves
