Mr. A. Bert Davis
Regional Administrator
U.S. Nuclear Regulatory Commission
Region III
799 Roosevelt Road
Glen Ellyn, IL 60137

Subject: Quad Cities Station Units 1 and 2
Response to Notice of Violation
Inspection Report 50-254/89022; 50-265/89022
NRC Docket Nos. 50-254 and 50-265

Reference: (a) Letter dated December 4, 1989 from E.G. Greenman
to Cordell.

(b) Letter dated January 10, 1990 from T. Kovach
to A. Bert Davis.

Mr. Davis:

Reference (a) transmitted a Notice of Violation (265/89022-02a) in which incomplete work instructions resulted in a reactor scram. Reference (b) transmitted corrective actions to prevent further noncompliance. In the response, Commonwealth Edison committed to revise QAP-1500-2 "Work Control Procedures" by March 1, 1990 and that training would be completed by March 15, 1990.

Quad Cities Station conducted an extensive rewrite of QAP-1500-2 to enhance the usability of the procedure which resulted in the development five (5) new procedures. To provide clarity to the procedure user, the five (5) new procedures were written to separate the requirements for safety, regulatory, reliability, ASME code and general work requests which were all previously contained in QAP 1500-2. The procedures have been reviewed and approved and personnel have received training in the procedures, as committed in reference (b).

- 2 -

April 9, 1990

The implementation of the procedures, however, will be delayed until two (2) weeks after the completion of the Unit 2 Outage. Quad Cities Station has determined that the implementation of these procedures following the completion of the Unit 2 Refueling Outage would provide a more controlled transition to these procedures by introducing the new requirements during a routine work load period instead of a Refueling Outage. The current target date for implementation of the new procedures is May 5, 1990.

If you have any questions or comments, please contact me at 708-515-7283.

Very truly yours,

Rita Stols
Nuclear Licensing Administrator
