Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNITS 1 AND 2
1992 ANNUAL STEAM GENERATOR INSERVICE INSPECTION REPORT

In accordance with the requirements of Technical Specifications 4.4.5.5.b and 6.9.1.4, Virginia Electric and Power Company hereby submits the 1992 Steam Generator Inservice Inspection Report for North Anna Power Station Units 1 and 2.

During the January/February 1992 mid-cycle outage for North Anna Power Station Unit 1 and the March 1992 refueling outage for North Anna Power Station Unit 2, the tubes in each unit's "A", "B", and "C" steam generators were examined. The information in Attachment A for Unit 1 and Attachment B for Unit 2 is a summary of the results of those examinations. These results include the number and extent of the tubes examined, location and characterization of each indication of an imperfection, identification of the tubes that were plugged, and a glossary of the terms used in the report. In addition, Attachment C provides a summary of pre-service examinations for the new steam generators currently being installed in North Anna Power Station Unit 1.

Should you require additional information, please contact us.

Very truly yours,

M. L. Bowling, Manager
Nuclear Licensing and Programs
