Perry Nuclear Power Plant
Docket No. 50-440
Core Operating Limits
Report - Remainder of Cycle 4

Gentlemen:

Attachment 1 to this letter provides the Core Operating Limits Report (COLR) for Unit 1 of the Perry Nuclear Power Plant (PNPP) for the remainder of the fourth fuel cycle. Analyses were evaluated based on the fuel loading configuration resulting from the Cycle 4 mid-cycle outage. This resulted in a change to the power and flow biased Minimum Critical Power Ratio curves for the GE8 fuel types. The results of the transient and accident analyses for the remainder of this cycle are documented in a revised Supplemental Reload Licensing Report added as a reference in the COLR, and is provided for information as Enclosure 1.

If you have any questions, please feel free to call.

Sincerely,

Robert A. Stratman
