Subject: Arkansas Nuclear One - Unit 1  
Docket No. 50-313  
License No. DPR-51  
Proposed Technical Specification Changes Per Supplement 1  
To Generic Letter 90-02

Gentlemen:

Supplement 1 to Generic Letter 90-02 dated July 31, 1992 (OCNA079224), "Alternative Requirements for Fuel Assemblies in the Design Features Section of Technical Specifications" provided modified guidance for flexibility in the repair of fuel assemblies containing damaged and leaking fuel rods by reconstituting the assemblies. This proposed amendment applies the guidance of Generic Letter 90-02, Supplement 1 to revise the Arkansas Nuclear One - Unit 1 (ANO-1) Technical Specification 5.3.1.1.

In accordance with 10CFR50.91(a)(1) and using the criteria in 10CFR50.92(c), Entergy Operations has determined that this change involves no significant hazards consideration. The basis for this determination is included in the attached submittal.

Although the circumstances of this request are neither emergency nor exigent, prompt review and approval is requested prior to our next ANO-1 refueling outage (1R11) which is currently scheduled to begin in early September of 1993. We request that the license amendment be effective upon issuance. If you have any further questions, please do not hesitate to contact my staff.

Very truly yours,

JWY/jt
