Subject: Changes to the NDE/Inservice Inspection Plan

References: A. FPC to NRC, dated February 9, 1988 (3F0288-09)

Dear Sir:

Florida Power Corporation (FPC) submitted the second ten-year interval Inservice Inspection (ISI) Plan in Reference A. The plan submitted was a general document extracted from the administrative controls and program description sections of a more detailed document named The Inservice Inspection Program. These sections of the program have been extensively revised to reflect recent organizational changes and augmented controls of the overall administrative process such as the implementation of change notices to document all technical changes.

Attached please find copies of the updated administrative controls and program description sections of the Inservice Inspection Program which for the remainder of the second ten-year interval are provided as the ISI Plan. FPC will periodically submit revisions to these sections as they are updated. Also, attached for your information are copies of change notices issued to the date of this letter.

Sincerely,

P. M. Beard, Jr.
Senior Vice President
Nuclear Operations
