Power**

CORPORATION  
Crystal River Unit 3  
Docket No. 50-302

Eugene Imbro  
58FR 15885  
3/24/93  
(2)

APR 1 9 1993

April 16, 1993  
DNSP93-0001

Mr. David L. Meyer  
Chief, Rules and Directives Review Branch  
Office of Administration  
U. S. Nuclear Regulatory Commission  
Washington, DC 20555

Dear Mr. Meyer:

Florida Power Corporation (FPC) has reviewed NRC draft generic letter "Availability and Adequacy of Design Basis Information" (ref. FR15885, March 24, 1993). FPC has also reviewed the comments submitted to you by NUMARC in their April 2, 1993 correspondence. FPC fully endorses the NUMARC comments.

FPC developed our Configuration Management Information System because we recognized the potential for improved efficiency and productivity. The project was managed by FPC personnel and in-house resources were used in the development. Our program has been very successful because of this and because we involved the users in the entire development. We are concerned that NRC attempts to informally regulate this area will not achieve an improvement in overall safety and will only result in unnecessary expenditure of limited utility resources. FPC urges the NRC to reconsider issuing the generic letter.

Sincerely,

P. M. Beard, Jr.  
Senior Vice President  
Nuclear Operations
